

Project Continuity Summary

AnalystLab Africa — Data Analytics Internship Programme | Week 3

1. Dataset Used

Superstore Sales Dataset — retail transaction data covering sales, profit, region, product category, and customer segment, visualized in a Power BI dashboard with Region and Category filters.

2. Business Problem

Understand where Superstore generates the most sales and profit versus where performance is weaker, so leadership can double down on strong regions, categories, and products, and address underperforming areas.

3. Key Findings from Week 2

- Overall performance: Total Sales = \$2M, Total Profit = \$286K, Total Orders = 10K, Average Sales per order = \$229.86, Profit Margin = 12.47%.
- Regional performance: West leads in sales, followed closely by East; Central and South trail behind, with South the weakest.
- Category performance: Office Supplies leads by sales share (\$836.15K), followed by Furniture (\$742K) and Technology (\$719.05K).
- Top profitable products: Canon copiers lead profit contribution, followed by Fellowes, Hewlett, Canon, and HP Desktop — profit is concentrated in a small number of high-ticket items.
- Segment contribution: Consumer segment dominates revenue (\$1.16M), well ahead of Corporate (\$0.71M) and Home Office (\$0.43M).
- Monthly trend: Sales are volatile with a general upward trend into year-end, with a dip in April/May, a strong spike in October, a pullback in November, then a peak in December.

4. Areas to Investigate Further in Week 3

- Sales Performance
Monthly sales trend and identification of strongest and weakest periods.
- Profitability Analysis
Profit by category, identifying which categories convert sales into profit most efficiently.
- Product Performance
Products generating losses, and the scale of their impact on overall profitability.
- Regional Performance
Regional growth opportunities based on sales volume and profit margin.
- Customer and Segment Analysis
Sales and profit contribution by customer segment, and which segment is most efficient.
- Discount Analysis
Relationship between discount level and profitability, and which categories are most negatively affected by discounting.
- Time-Based Analysis
Seasonal patterns in sales and profit, and year-over-year profit growth.
